

Alcohol and Irritable Bowel Syndrome

Irritable bowel syndrome (IBS) is a painful disorder of the large intestinal tract (colon). In this condition, the intestinal tract loses its capability to function properly. In IBS, food either moves too gradually or too quickly through the intestine. When the contents inside the intestinal tract move slowly, it often results in irregularity. When the consumed food relocations quick, the intestine is not able to take in any fluids. As an outcome, too much fluid is discovered in the stool (diarrhea).
