

## Bloodshot Eyes in the Morning

**B**loodshot eyes is a condition that is characterized by red patches on the white portion of the eyes (called sclera). In many cases, such spots are noticed in the early morning, after sleep. This condition is brought on by inflammation and augmentation of the blood vessels in the sclera. This might be due to numerous reasons and the majority of them are safe. Nevertheless, in some cases, bloodshot eyes in the early morning might suggest some underlying medical conditions. Typically, it is not accompanied with extra signs, but, some may experience pain, irritation or vision issues together with this condition.
