

Perforated Bowel Causes

Sometimes, either due to some traumatic injury or due to certain health problems, a small hole or gap can form in the walls of either the large intestine, the small intestine or the stomach. What occurs due to this is that the food or perhaps the stool might pass on to the abdomen, thus resulting in perforated bowel. This can also lead to blood poisoning and swelling of the abdomen, and if this issue is not treated immediately, then it may also prove fatal. In this article, you will come across the perforated bowel causes together with their signs and treatments.

Causes of Stomach Problems

Gas is a common byproduct of digestive process. It stems from high-fiber vegetables and fruits.

Often, gas also forms due to swallowing too much of air while eating or talking. This gas is primarily responsible for bloating and sometimes, also causes stomach pain. Upset stomach, on the other hand, is the outcome of irritable bowel syndrome (IBS). It refers to a condition, where there is no normal passage of stool. This condition is close to diarrhea, as the person often passes frequent watery stools. Constant indigestion indicates that there is something wrong with the foods that you eat, and that there is no correct digestion. Constipation describes hard stools that are difficult to pass. It is something that can directly affect the quality of life of a person by making him vulnerable to various ailments.

Call your doctor if you come across the symptoms of irritable bowel syndrome or if you face any change in the defecation that does not go away.

Ibs

“ This article has been written and posted by a health consultant working at bookmydoctor.com, who also provides free of cost consultancy to clients and advise to search and find, irritable bowel syndrome treatment By visiting the site, patients can look for irritable bowel syndrome diet plan and the best ways to cure irritable bowel syndrome to obtain their proper treatment.

Ovarian Cysts

Navel pain in women can occur due to the presence of ovarian cysts. A cyst is a pouch like structure which contains the body fluids. Cysts are considered as unusual fluid filled structures because they are not part of any body tissues. The ovaries found near the uterus are an integral part of the female reproductive system. Development of ovarian cysts, at first may not cause any discomfort, but if these fluid filled sacs burst, patients frequently grumble about discomfort around belly button.
